Reply to Office Action of February 16, 2006

ABSTRACT

A camera for generating an image signal, and a camera installing part for installing said camera in a folder or a body portion of a mobile terminal is provided. The camera is configured to protrude out of the camera installing part when the folder is unfolded, and to be retracted into the camera installing part when the folder is folded. The camera installing part may be disposed in a hinge part for coupling the folder and the body portions of the mobile terminal.
